

# INVERTED BUCKET TRAP CAPACITY CHART

**REPRINTED WITH PERMISSION FROM ARMSTRONG INTERNATIONAL, INC.**

**PRESSURE DIFFERENCE BETWEEN STEAM LINE AND RETURN LINE**

←----- 200 & 800 Series -----> <----- 300 Series -----> <----- 400 Series ----->

The black "sawtooth" curves on this chart show actual trap capacities (continuous discharge) using maximum diameter orifices at pressures shown. The extensions of these curves to the left show the capacities of the same orifices at pressures below the maximum for which the trap is usually furnished. Each vertical step in the black curve is at the point beyond which the next smaller size orifice is supplied. The orifice diameters are shown in fraction of inches.
