TEMPERATURE ACTUATED WATER REGULATING VALVE

RELIABLE TEMPERATURE CONTROL DESIGNED FOR RUGGED APPLICATIONS

This thermostatic cooling control valve has everything you need for reliable temperature control. The Sterlco® 56-T Series Temperature Actuated Water Regulating Valve evenly regulates cooling water and other fluids in the most rugged applications. It's ideal for hydraulic power packaged equipment, hydraulic presses, or wherever reliable performance is required.

Sterlco's® self-modulating cooling control valves are temperature actuated, self powered, and applicable to cooling processes using water or other fluids. 56-T Series valves are available in eight different sizes. To ensure dependability, every valve is factory-tested three times in different temperature baths. For the temperature control you need, get the valve that can deliver.
